Batch 20 – AMA Universiy Inc.

Investigation Worksheet

DOMAIN DEEP-DIVE & DARK WEB INVESTIGATION WORKSHEET

Investigation Date: September 11, 2026

Analyst: Raul Austero Varias Jr.

Target Campaign: MedLock Ransomware / Pacifica General Hospital Breach

SECTION 1: WHOIS EXTRACTION

DOMAIN: medlock-c2.biz

Creation Date: 2026-04-10T08:22:15Z

Registrar: NameCheap, Inc.

Registrant Email: 7c8d9e0f1a2b3c4d5e6f7a8b9c0d1e2f@proxy.namecheap.com

Name Servers: NS1.BELHOST.RU, NS2.BELHOST.RU

Country of Registrant: US

Proxy/Privacy Service Used? (Y/N): Y

Shared email with other domains? (Y/N): Y - It has been shared with 32 other domains including the health-portal-update.com

DOMAIN: healthcare-update-portal.org

Creation Date: 2026-04-12T12:45:33Z

Registrar: PDR Ltd. d/b/a PublicDomainRegistry.com

Registrant: WhoisGuard Protected

Name Servers: NS1.BELHOST.RU, NS2.BELHOST.RU

Country of Registrant: US

Proxy/Privacy Service Used? (Y/N): Y

Shared email with other domains? Y - It was same proxy as medlock-c2.biz

DOMAIN: jobs-portal.net

Creation Date: 2026-04-05T14:22:08Z

Registrar: Alibaba Cloud Computing Ltd.

Registrant: liwei.jobs@163.com

Name Servers: DNS1.REGISTRAR-SERVERS.COM, DNS2.REGISTRAR-SERVERS.COM

Country of Registrant: CN

Proxy/Privacy Service Used? (Y/N): Y

Shared email with other domains? (Y/N): N

SECTION 2: DNS HISTORY ANALYSIS

2A. medlock-c2.biz DNS Findings:

Primary IP resolved: 5.188.88.99

Any IP changes? (Y/N): Y - The primary is 5.188.88.99 change to 5.188.88.100 on 2026-04-14

Name servers: NS1.BELHOST.RU, NS2.BELHOST.RU

Any unusual DNS patterns? (e.g., fast flux, short TTL): This is fast flux behavior

or infrastructure rotation to evade blocking.

2B. healthcare-update-portal.org DNS Findings:

Primary IP resolved: 5.188.88.99

Any IP changes? (Y/N): Y - The primary is 5.188.88.99 change to 5.188.88.100 on 2026-04-14

Name servers: NS1.BELHOST.RU, NS2.BELHOST.RU

Coordinated IP change with other domain? (Y/N): Y - It's a same name servers as medlock-c2.biz - STRONG infrastructure link.

2C. jobs-portal.net DNS Findings:

Primary IP resolved: 47.89.33.122

Any IP changes? (Y/N): N

Name servers: DNS1.REGISTRAR-SERVERS.COM, DNS2.REGISTRAR-SERVERS.COM

Typosquatting relationship: It was Generic domain, not targeting specific org.

SECTION 3: DARK WEB FORUM MENTIONS

3A. Thread 92456 ("MedLock Ransomware - complete infrastructure for sale")

Forum name: Exploit[.]in

Posting user: CrimsonVault

Date of post: 2026-04-09 20:15:00 UTC

Domains mentioned: medlock-c2[.]biz, healthcare-update-portal[.]org

Price of infrastructure: \$3,500 USD

Payment method: XMR only

3B. Thread 92801 ("Healthcare email leads for ransomware campaigns")

Posting user: CrimsonVault

Date of post: 2026-04-11 09:30:00 UTC

Target sector mentioned: US healthcare organizations (hospitals, clinics)

What does this reveal about adversary's targeting strategy? HR department contacts (resume phishing), IT department contacts (fake updates), Any hospital with EPIC EHR system

3C. Thread 93122 ("Pacifica General Hospital hit with MedLock - who did it?")

Posting user(s): HealthcareWatch, CrimsonVault, RansomBroker, UnknownUser

Confirmation of attack? (Y/N): Y - CrimsonVault confirm that the infrastructure sale is matches domain

Domains discussed: medlock-c2[.]biz, healthcare-update-portal[.]org, jobs-portal[.]net

Adversary's response: I sell the tools. I don't operate them directly. Buyer confidentiality.

3D. Thread 93450 (Bulletproof hosting for sale)

Hosting provider AS number: AS50340

Country of hosting: Russia

Payment method: XMR only

Does this match the C2 infrastructure IPs? (Y/N): Y - 5.188.88.99 and 5.188.88.100 both in AS50340

SECTION 4: INFRASTRUCTURE LINK ANALYSIS

Complete the following correlation table (Mark ✓ or X):

Link Indicator	A + B linked?	A + C linked?	B + C linked?
Same name servers	✓	X	X
Same IP range	✓	X	X
Same registrar	X	X	X
Same proxy email	✓	X	X
Same dark web seller	X	X	X
Same creation week	✓	X	X

Based on the above, which domains belong to the SAME adversary infrastructure?

The Domain A and B is belong to the same adversary infrastructure (CrimsonVault) while the Domain C is from different registrar, IP, country, and no dark web sale link. Therefore, It was separate infrastructure.

SECTION 5: ADVERSARY PROFILING (from Dark Web Activity)

Adversary Alias(es): CrimsonVault

First seen: 2026-03-20

Platforms used: Exploit[.]in

Services offered: Selling MedLock ransomware infrastructure, Healthcare email leads purchasing.

Estimated technical skill level (Low/Med/High): High - It was able to Medlock configure bulletproof hosting, Custom Medlock encryptor, Phishing email template, C2 Domain.

Geographic indicators: Hosting located in Russia (AS50340) BELHOST.RU, but the domain registration email is a US-based proxy service, Used Russian-language in forum - likely Russian-speaking operator.

Motivation: [Financial / Espionage / Hacktivism] selling infrastructure, ransomware profits.

SECTION 6: FINAL INTELLIGENCE FINDINGS

Write a 3-5 sentence summary answering:

1. Who is the likely adversary behind the PGH attack?
2. What infrastructure did they use?
3. What dark web evidence supports the attribution?

The adversary behind the Pacifica General Hospital MedLock ransomware attack is likely the buyer who purchased the infrastructure from CrimsonVault on Exploit[.]in forum. In a reply within THREAD ID: 93122, CrimsonVault stated that they sold the infrastructure including the domains medlock-c2[.]biz and healthcare-update-portal[.]org on 2026-04-09, which directly matches the domains used in the PGH attack. This infrastructure utilized bulletproof hosting based in Russia, which ignores abuse complaints. Furthermore, these domains shared the same proxy and name server. While the phishing domain jobs-portal[.]net appeared as a separate infrastructure utilizing a different proxy, IP address, and name server—it was still used to spoof senders within

the same campaign. Although the actual ransomware operator remains unidentified, CrimsonVault has been confirmed as the infrastructure provider.

SECTION 7: SAFE DARK WEB NAVIGATION RULES (Educational)

List 5 rules for safe dark web navigation that you learned from this activity:

1. Never access dark web forums from a personal or work computer always use an isolated virtual machine or dedicated analysis system that can be wiped afterward.
2. Never click links, download files, or open attachments found on these forums, even ones that look like proof or samples.
3. Never use real personal information, real email addresses, or real payment details when creating any account or persona for research purposes.
4. If live access is ever required, use Tor Browser with the highest security settings enabled and JavaScript disabled, since scripts are a common way visitors get deanonymized or attacked.
5. Prefer historical or archived data over live connections. Reading a saved copy gives you the same intelligence without exposing your identity or system to the live site.
