SECTION 6: SAMPLE RECORD VERIFICATION

=====

Pick 3 records and verify against original source:

Record 1 (Source A, Row 1):

Original: 2026-04-01 09:22:34,10.12.45.22,185.143.223.115:443,3,1524,0

Normalized: timestamp: "2026-04-01T09:22:34Z", destination_ip:
"185.143.223.115", severity: "HIGH"

Verification: PASS - timestamp correctly converted to ISO 8601, port :443
correctly stripped from the IP, severity 3 correctly mapped to HIGH per Rule
4.

Record 2 (Source B, Row 1):

Original: {"event": {"type": "NetworkConnect", "time": "2026-04-01T09:23:15Z", "host": "10.12.45.22", "destination": {"address": "185.143.223.115", "port": 80}, "process": "powershell.exe"}}
Normalized: source_ip: "10.12.45.22", destination_ip: "185.143.223.115", indicator_type: "IP"
Verification: PASS -
nested destination.address field correctly flattened to top-level destination_ip; timestamp was already ISO format and correctly passed through unchanged.

Record 3 (Source E, Row 1):

Original: <134>Apr 15 08:00:00 SIEM-01 CORRELATION[4421]: [HIGH] Alert: Data Exfiltration Detected -

Source:10.12.45.22 Dest:185.143.223.115 Bytes:2450000 Signature:ET MALWARE SilentBanker C2 Beacon

Normalized: timestamp: "2026-04-15T08:00:00Z", source_ip: "10.12.45.22", destination_ip: "185.143.223.115", severity: "HIGH", threat_family: "SilentBanker"

Verification: PASS - syslog's non-standard timestamp correctly assumed year 2026 and converted to ISO; Source: and Dest: embedded fields correctly extracted; threat family correctly pulled from the signature text via Rule 7
